

Navigating to UI Policies – opening System UI → UI Policies

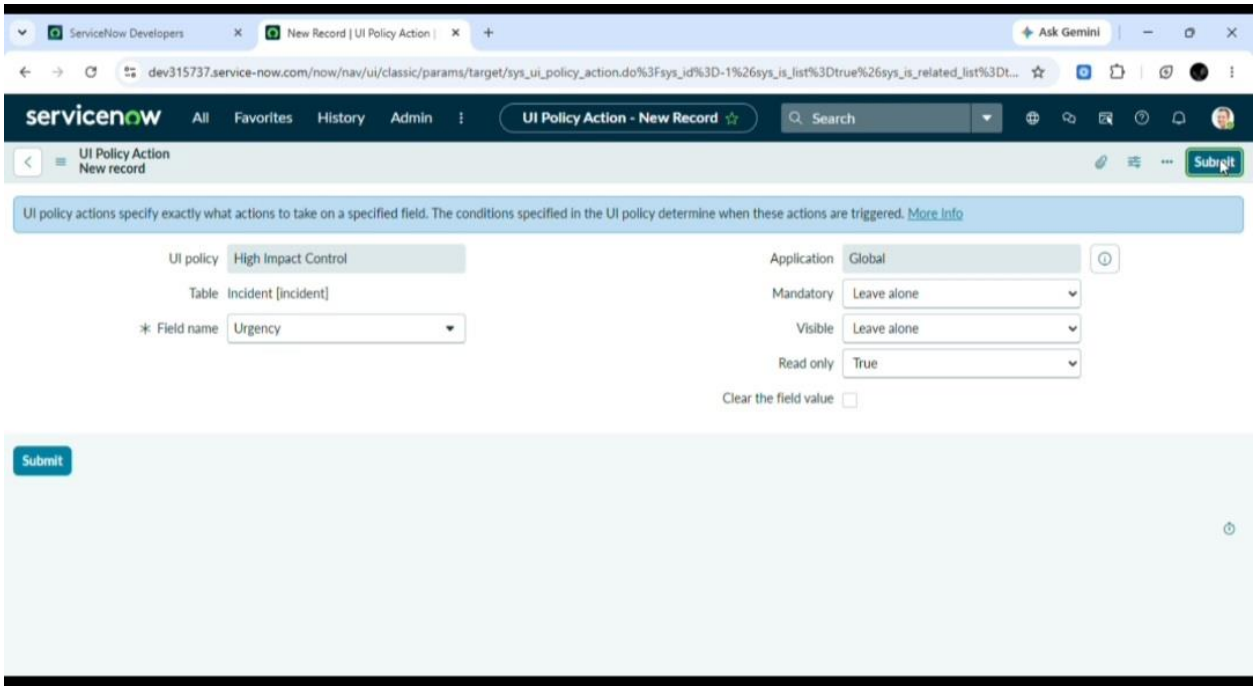

Creating a UI Policy – creating a “High Impact Control” UI Policy with a condition based on Impact

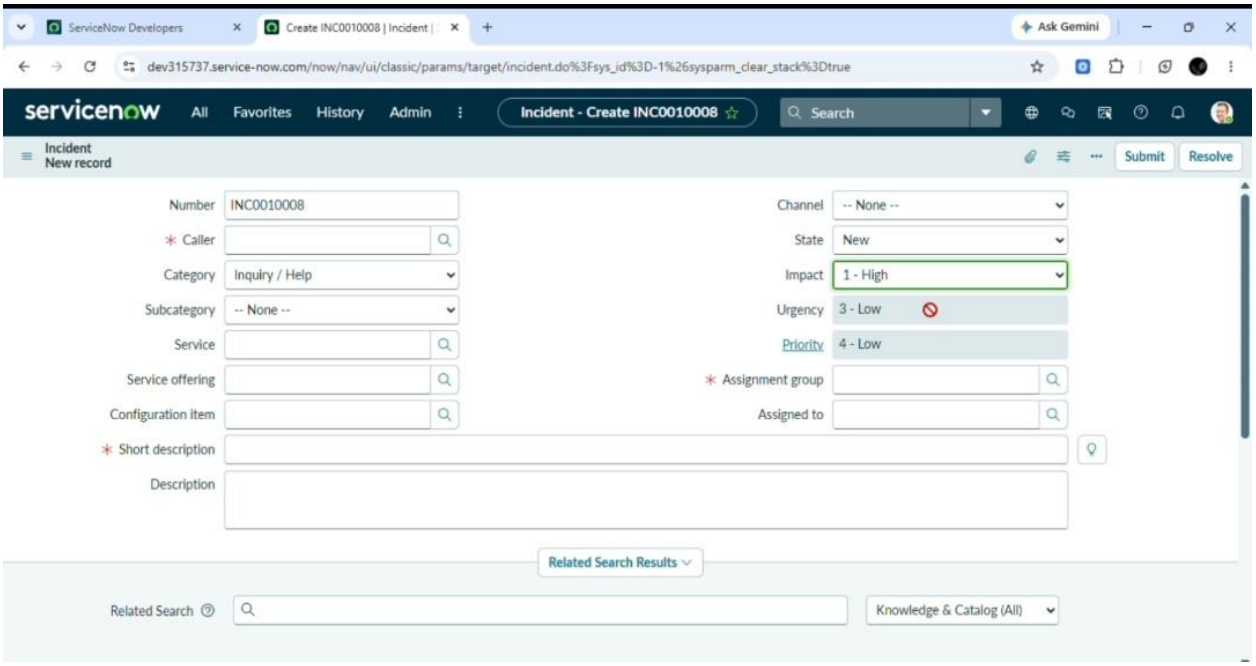

UI Policy Action – Making Assignment Group Mandatory – configuring the Assignment group field as mandatory

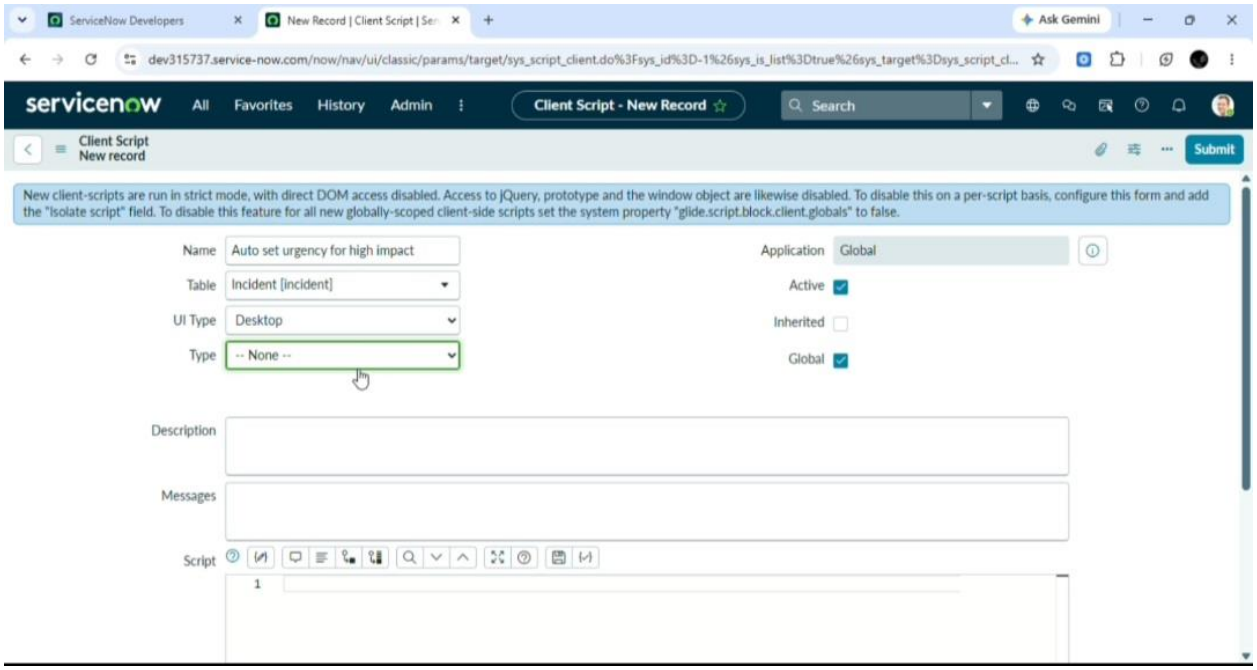

Viewing/Verifying UI Policies – checking the created High Impact Control policy in the UI Policy list

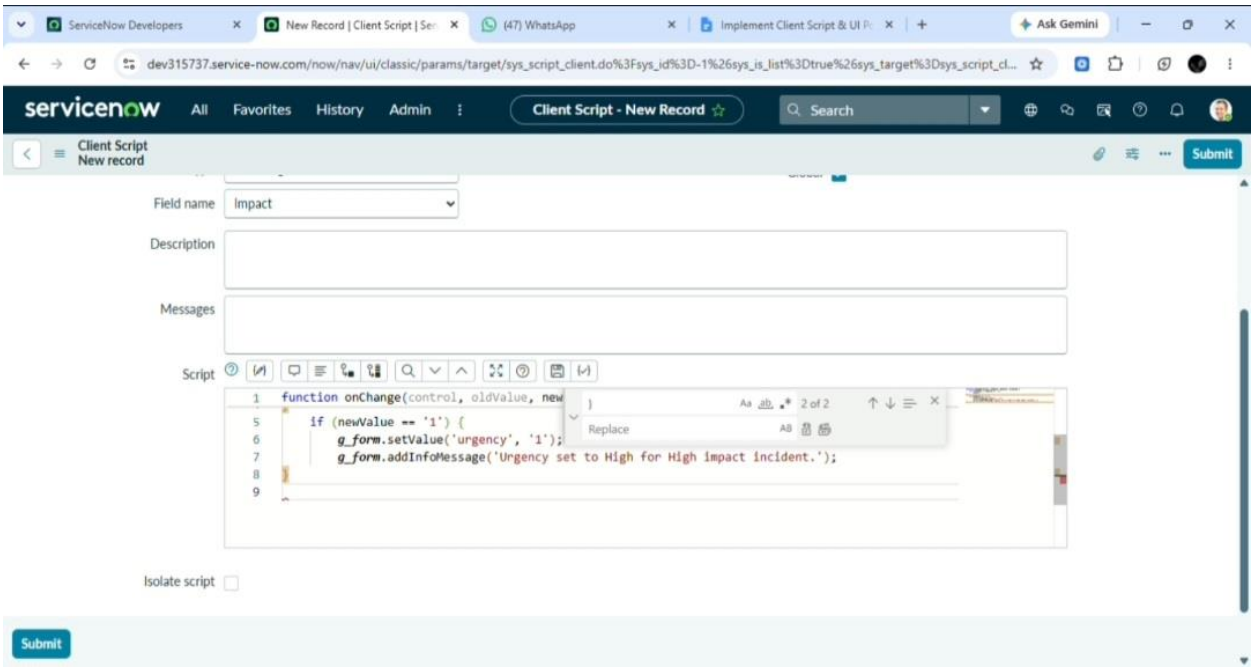

UI Policy Action – Making Urgency Read-only – configuring the Urgency field as read-only

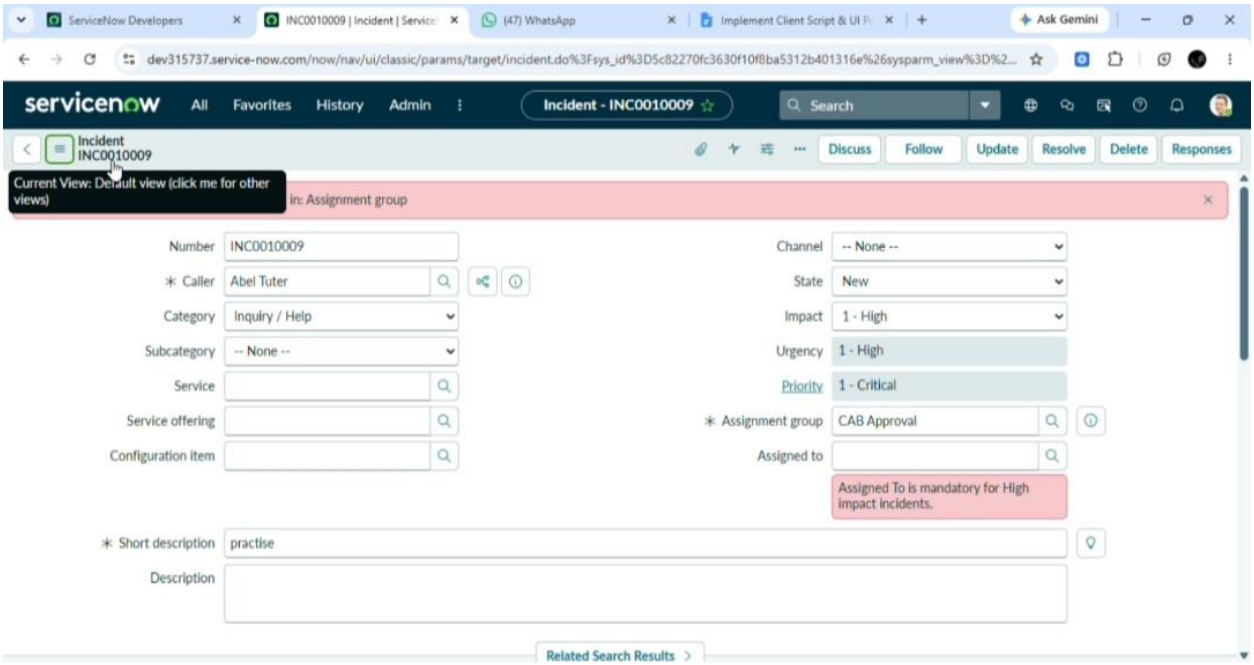

Testing the UI Policy on an Incident Form – checking the behavior when Impact = High

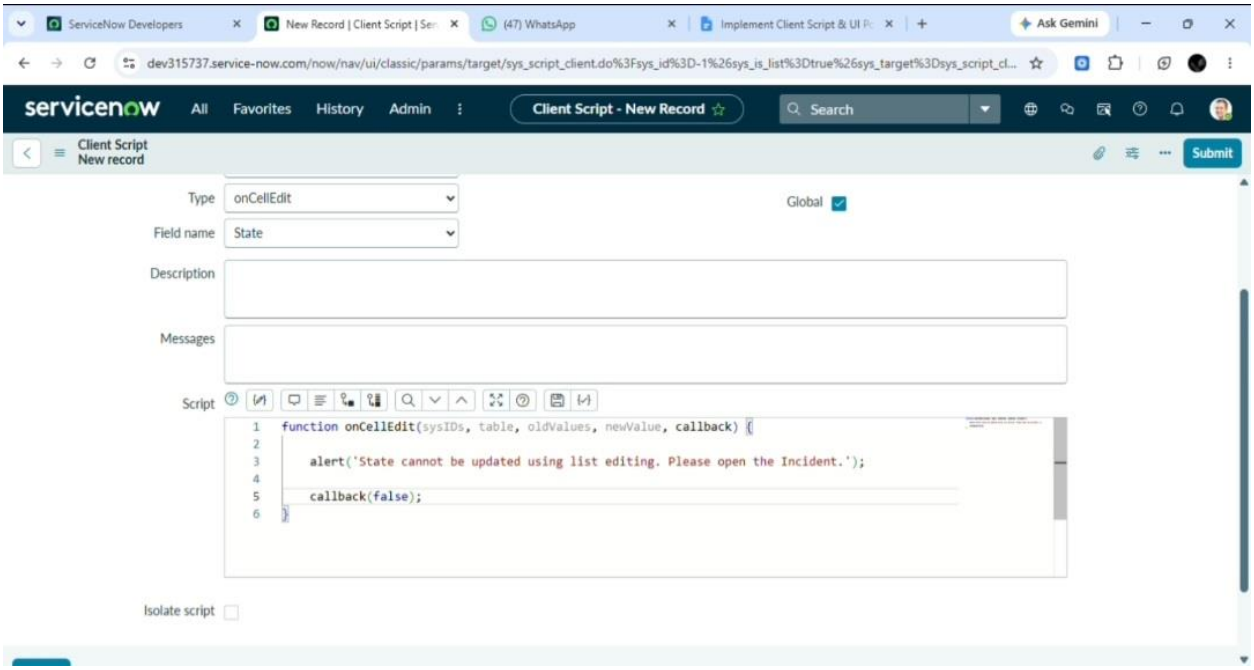

Creating a Client Script – creating “Auto set urgency for high impact” on the Incident table

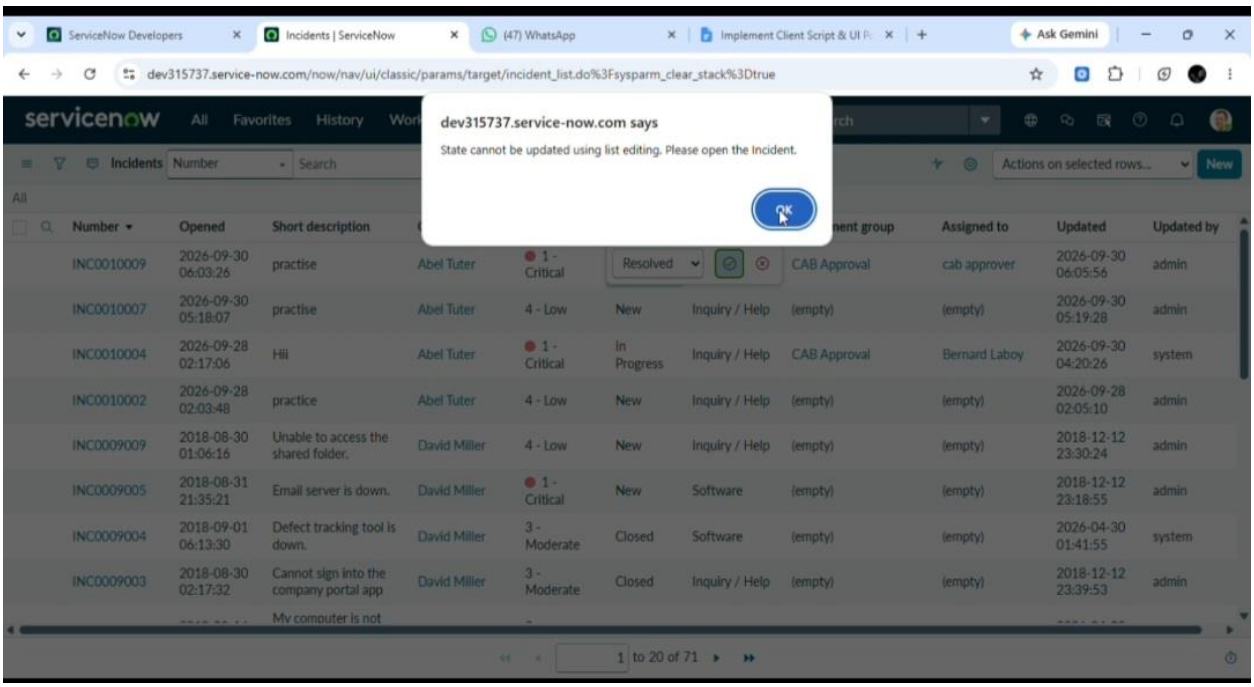

Client Script – onChange Script – automatically setting Urgency to High (1) when Impact is High (1) and displaying a message

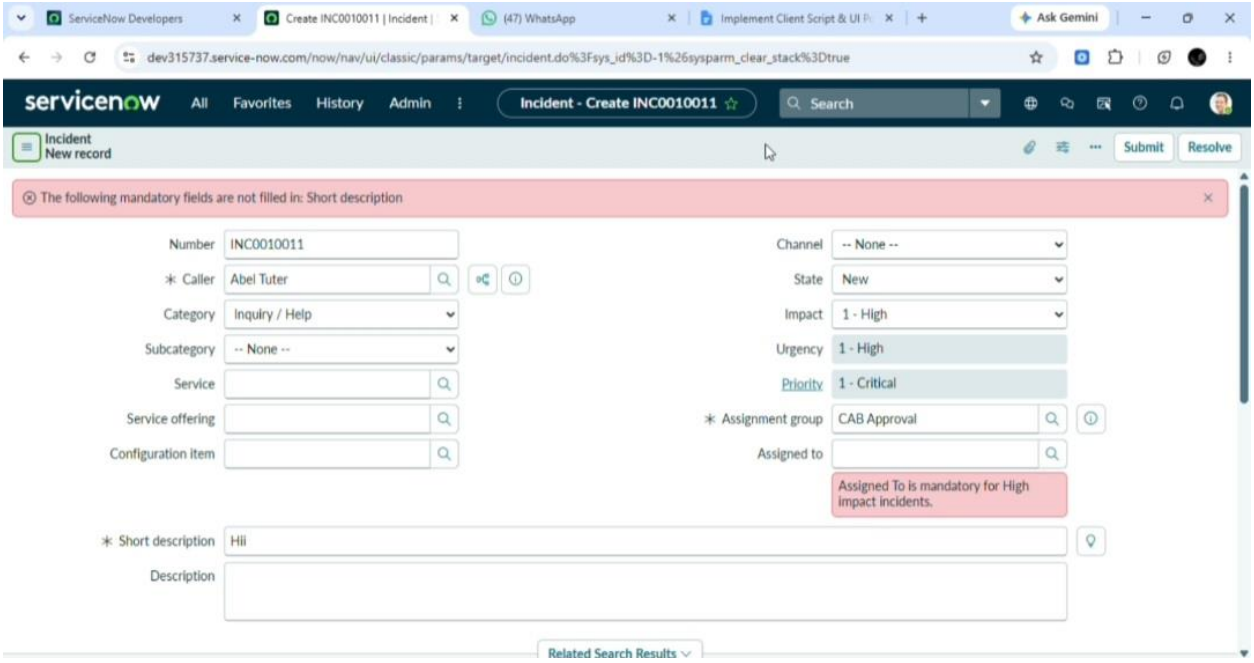

Testing the Client Script + UI Policy – verifying automatic urgency and mandatory Assignment group for a high-impact incident

Client Script – onCellEdit – preventing the State field from being changed directly from the list view

The State cannot changed

Without Give assigned to option we can't Save.
